PostCP

Rates, routing and UPU CP81/CP82 reports for postal operators

Access is controlled per user, role and function, and every change to key records is recorded.

Verification code	Per function	Audit trail
Sign-in with a second factor	Fine-grained permissions for each function	Who changed each key record, and when

AUTHENTICATION

- Sign-in with a verification code (two-factor).
- Token-based sessions (JWT, Spring Security).

TRACEABILITY

- Audit trail of who changed each key record, and when.
- Pricing records keep their full change history.
- Activity logs.

AUTHORIZATION

- Users, roles and fine-grained permissions per function.

DEPLOYMENT AND HOSTING

- Delivered as containers (Docker); data in MySQL.
- Hosted at Infomaniak in Switzerland.

This overview describes how the product is designed and operated as of October 2026. It is not a certification or an audit report. Details for your environment are agreed in the contract.
